Readme

- To begin with, install vtk with **version 8.2.0** which was used to develop the program.
- Next download the CT data set from eclass given under Lecture 08.
- Finally, in the file code.py, change the path of the path variable to where you stored the CT folder.
- And run the program using either an IDE or command prompt.
- Done!

You can download the code from github: https://github.com/Anoynomous9873/MM804-Assignment2.git
